## CIRCUIT DESCRIPTION

## 1. Description of components

## 1-1. Power supply unit (X00-273X-XX 0-10 : K,M 2-71 : E)

Ref. No.	Use/Function	Operation/Condition/Compatibility
IC1, 2	Pulse generator ICs	Generate pulse for DC/DC.
IC3	Protection IC	Performs muting when power is turned ON/OFF. Detection of DC leakage to speaker terminals, detection of DC in case of input grounding failure, muting in ASO detection, relay control and turning two-color LED ON/OFF. The controls above are performed when TH1 detects choke coil temperature (120°C) or sub-heat-sink temperature (100°C).
Q1, 2	Bias	Temperature compensation of final transistor.
Q3~14	Cascode bootstrap	VIG circuit.
Q15~18	Driver	Final transistor driver.
Q19~26	Power final stage	
Q27, 28	ASO detector	
Q29~40	Switching	DC/DC driver circuit.
Q41~56	Switching	DC/DC power stage.
Q57~60	Switching	P-CON detection.
Q61	Switching	Transfers ASO detection signal to IC3.
Q62	Constant current circuit	Drives power relay.
Q63, 64	Switching	TH3 detects 60°C and turns ON the fan.

## 1-2. Power amplifier unit (X07-271X-XX 0-10 : K,M 2-71 : E)

Ref. No.	Use/Function	Operation/Condition/Compatibility
IC1, 2 1/2	Input buffer	Boosts input signal by +10dB and performs balanced transmission.
IC1, 2 2/2	Input buffer inversion stage	Inverts input signal and performs balanced transmission.
IC3	Isolation amp	
IC4	Inverter IC for BTL	
IC5	LPF	For sub-woofer.
IC7, 8	Class A first stage	
Q1, 2	Input MUTE	Main amplifier input muting transistors.
Q3~6	Class A first stage	
Q7~10	Class A second stage	
Q11, 12	Class A cascode	
Q13~16	Class A third stage	
Q17, 18	Class A current mirror	
Q19~22	Constant voltage circuit	For class A control.
Q23, 24	Constant current circuit	Class A ripple elimination circuit.
Q25, 26	Constant current circuit	For class A first stage.
Q27~30	Constant voltage circuit	For balance, ISO, sub-woofer and inverter.
Q31, 32	MUTE driver	Turn muting ON/OFF.
Q33, 34	LED ON/OFF	Green with Q34 ON, then red if Q33 also goes ON.

## CIRCUIT DESCRIPTION

## 2. Two-color LED

## 2-1. Basic operation

## • ON operations

Green LED lights when P-CON is turned ON.

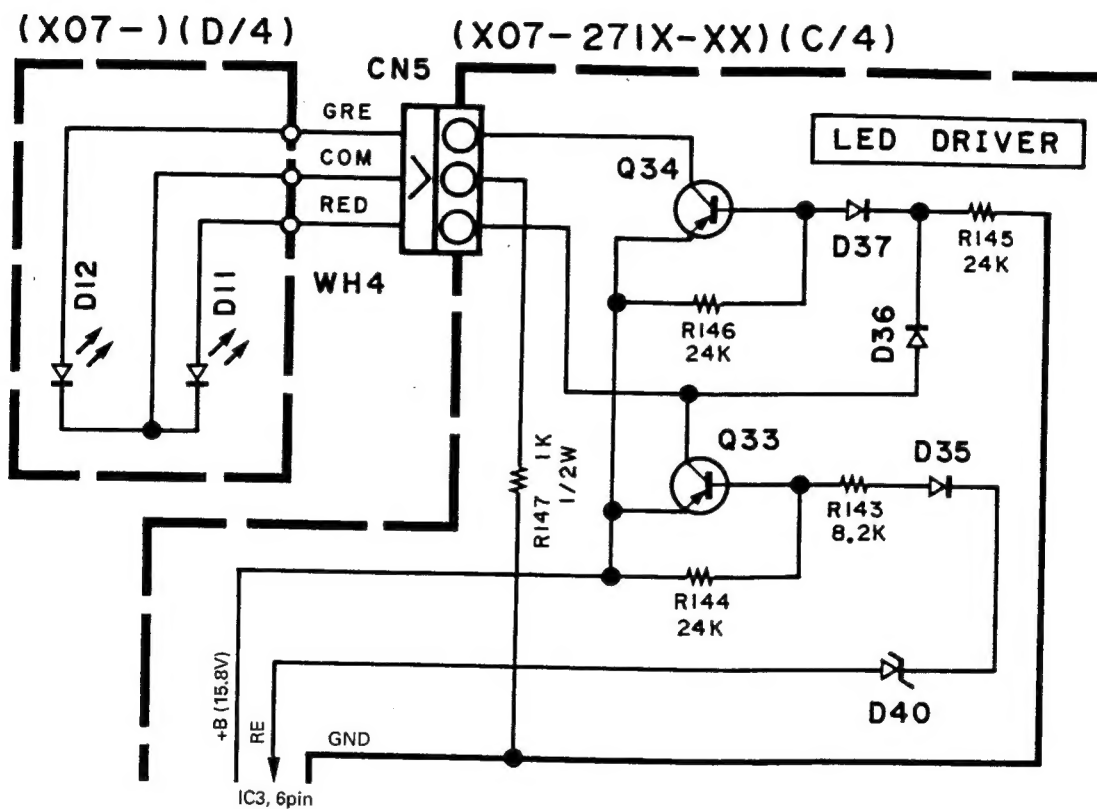

Red LED lights at the same time as relay ON.

## • OFF operations

While P-CON is turned OFF, green LED lights at the same time as relay OFF. The LEDs are OFF in other cases.

## 2-2. Operation principle

When P-CON is turned ON, DC/DC is activated, turning Q34 (X07) ON via +15.8V AVR (X07, Q27) and lighting D12 (Green) (X07). Then, pin 6 of IC3 (X00) goes Low (0.7V), turning the relay ON and Q33 (X07) ON, also lighting D11 (Red) (X07) while inhibiting Q34 (X07). During operation of protection function (ASO. DC leakage or thermal protection), when pin 6 of IC3 (X00) repeats Low (0.7V) and High (10V), the lighting of Red/Green is also repeated at the same time as the relay ON/OFF.

## CIRCUIT DESCRIPTION

## 3. DC/DC circuit with PWM (K type 0-10 only)

## 3-1. Basic operation

This circuit detects the voltage of the secondary side of DC/DC (after rectification and smoothing), that is, main amplifier power supply voltage, and controls the switching pulse duration of DC/DC to make the power supply voltage constant regardless of battery voltage and load variations.

## 3-2. Operation principle

First, let us consider about the variation of the voltage input to DC/DC, BATT (Refer to Fig.1).

There is the following relationship

$$+B (-B) = n_2 / n_1 \cdot BATT \cdot TON / T$$

Assuming that the variation of BATT is  $\Delta BATT$ ,  $+B (-B)$  can be a constant voltage by varying the pulse duration according to  $\Delta BATT$  as shown below

$$\Delta TON \propto \Delta BATT / BATT \cdot TON$$

When  $+B (-B)$  varies due to a load condition change (ex

: small power/large power, etc.),  $+B (-B)$  can be made a constant voltage by varying  $TON$  according to the change.

For the detection (Fig.1), it is usually only on the NFB (+) side. By detecting the variation of  $+B$  ( $\Delta V_{SENSE}$ ) with the error amp, the PWM comparator of the next stage is controlled to control the output pulse duration by varying the sawtooth wave slicing level in terms of DC (internal operation of IC). The operations above allow to control  $TON$  so that  $+B$  is constant with respect to the variations of  $+B$ .

However, as this power is supplied to the audio amp circuitry, the variations of  $+B$  and  $-B$  are not always identical, making it also necessary to detect  $-B$ . When we take NFB (-) in consideration, the variation component of  $-B$  with respect to  $V_{REF}$  of the error amp is transferred by  $C1$  and  $R5$  (Fig.1), the voltage of  $-B$  is also detected, and  $TON$  is controlled accordingly.

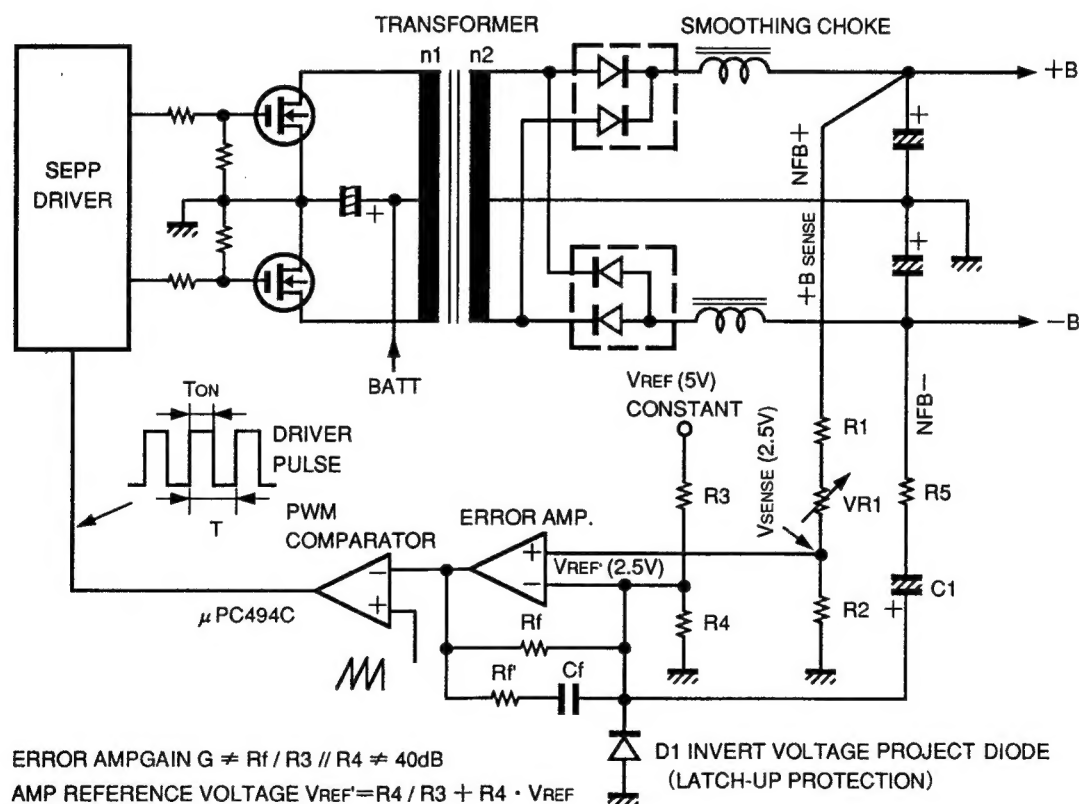

Fig.1

# KAC-1023

## ADJUSTMENT

- (1) Idling adjustment (no-signal current)
  - Adjust VR1 so that the voltage across IDL (L CH) of CN5 and LOUT of JK3 is 3mV.
  - Adjust VR2 so that the voltage across IDL (R CH) of CN6 and ROUT of JK3 is 3mV.
- (2) Voltage adjustment (0-10 destination only)
  - Adjust VR3 so that the voltage across +B (L CH) of CN5 and GND is 51.5V.
  - Adjust VR4 so that the voltage across +B (R CH) of CN6 and GND is 51.5V.
- (3) DC/DC frequency variation
  - The adjustment is normally not necessary. Use VR5 only as occasion calls.

• DC voltages are as measured with a high impedance voltmeter. Values may vary slightly due to variations between individual instruments or/and units.

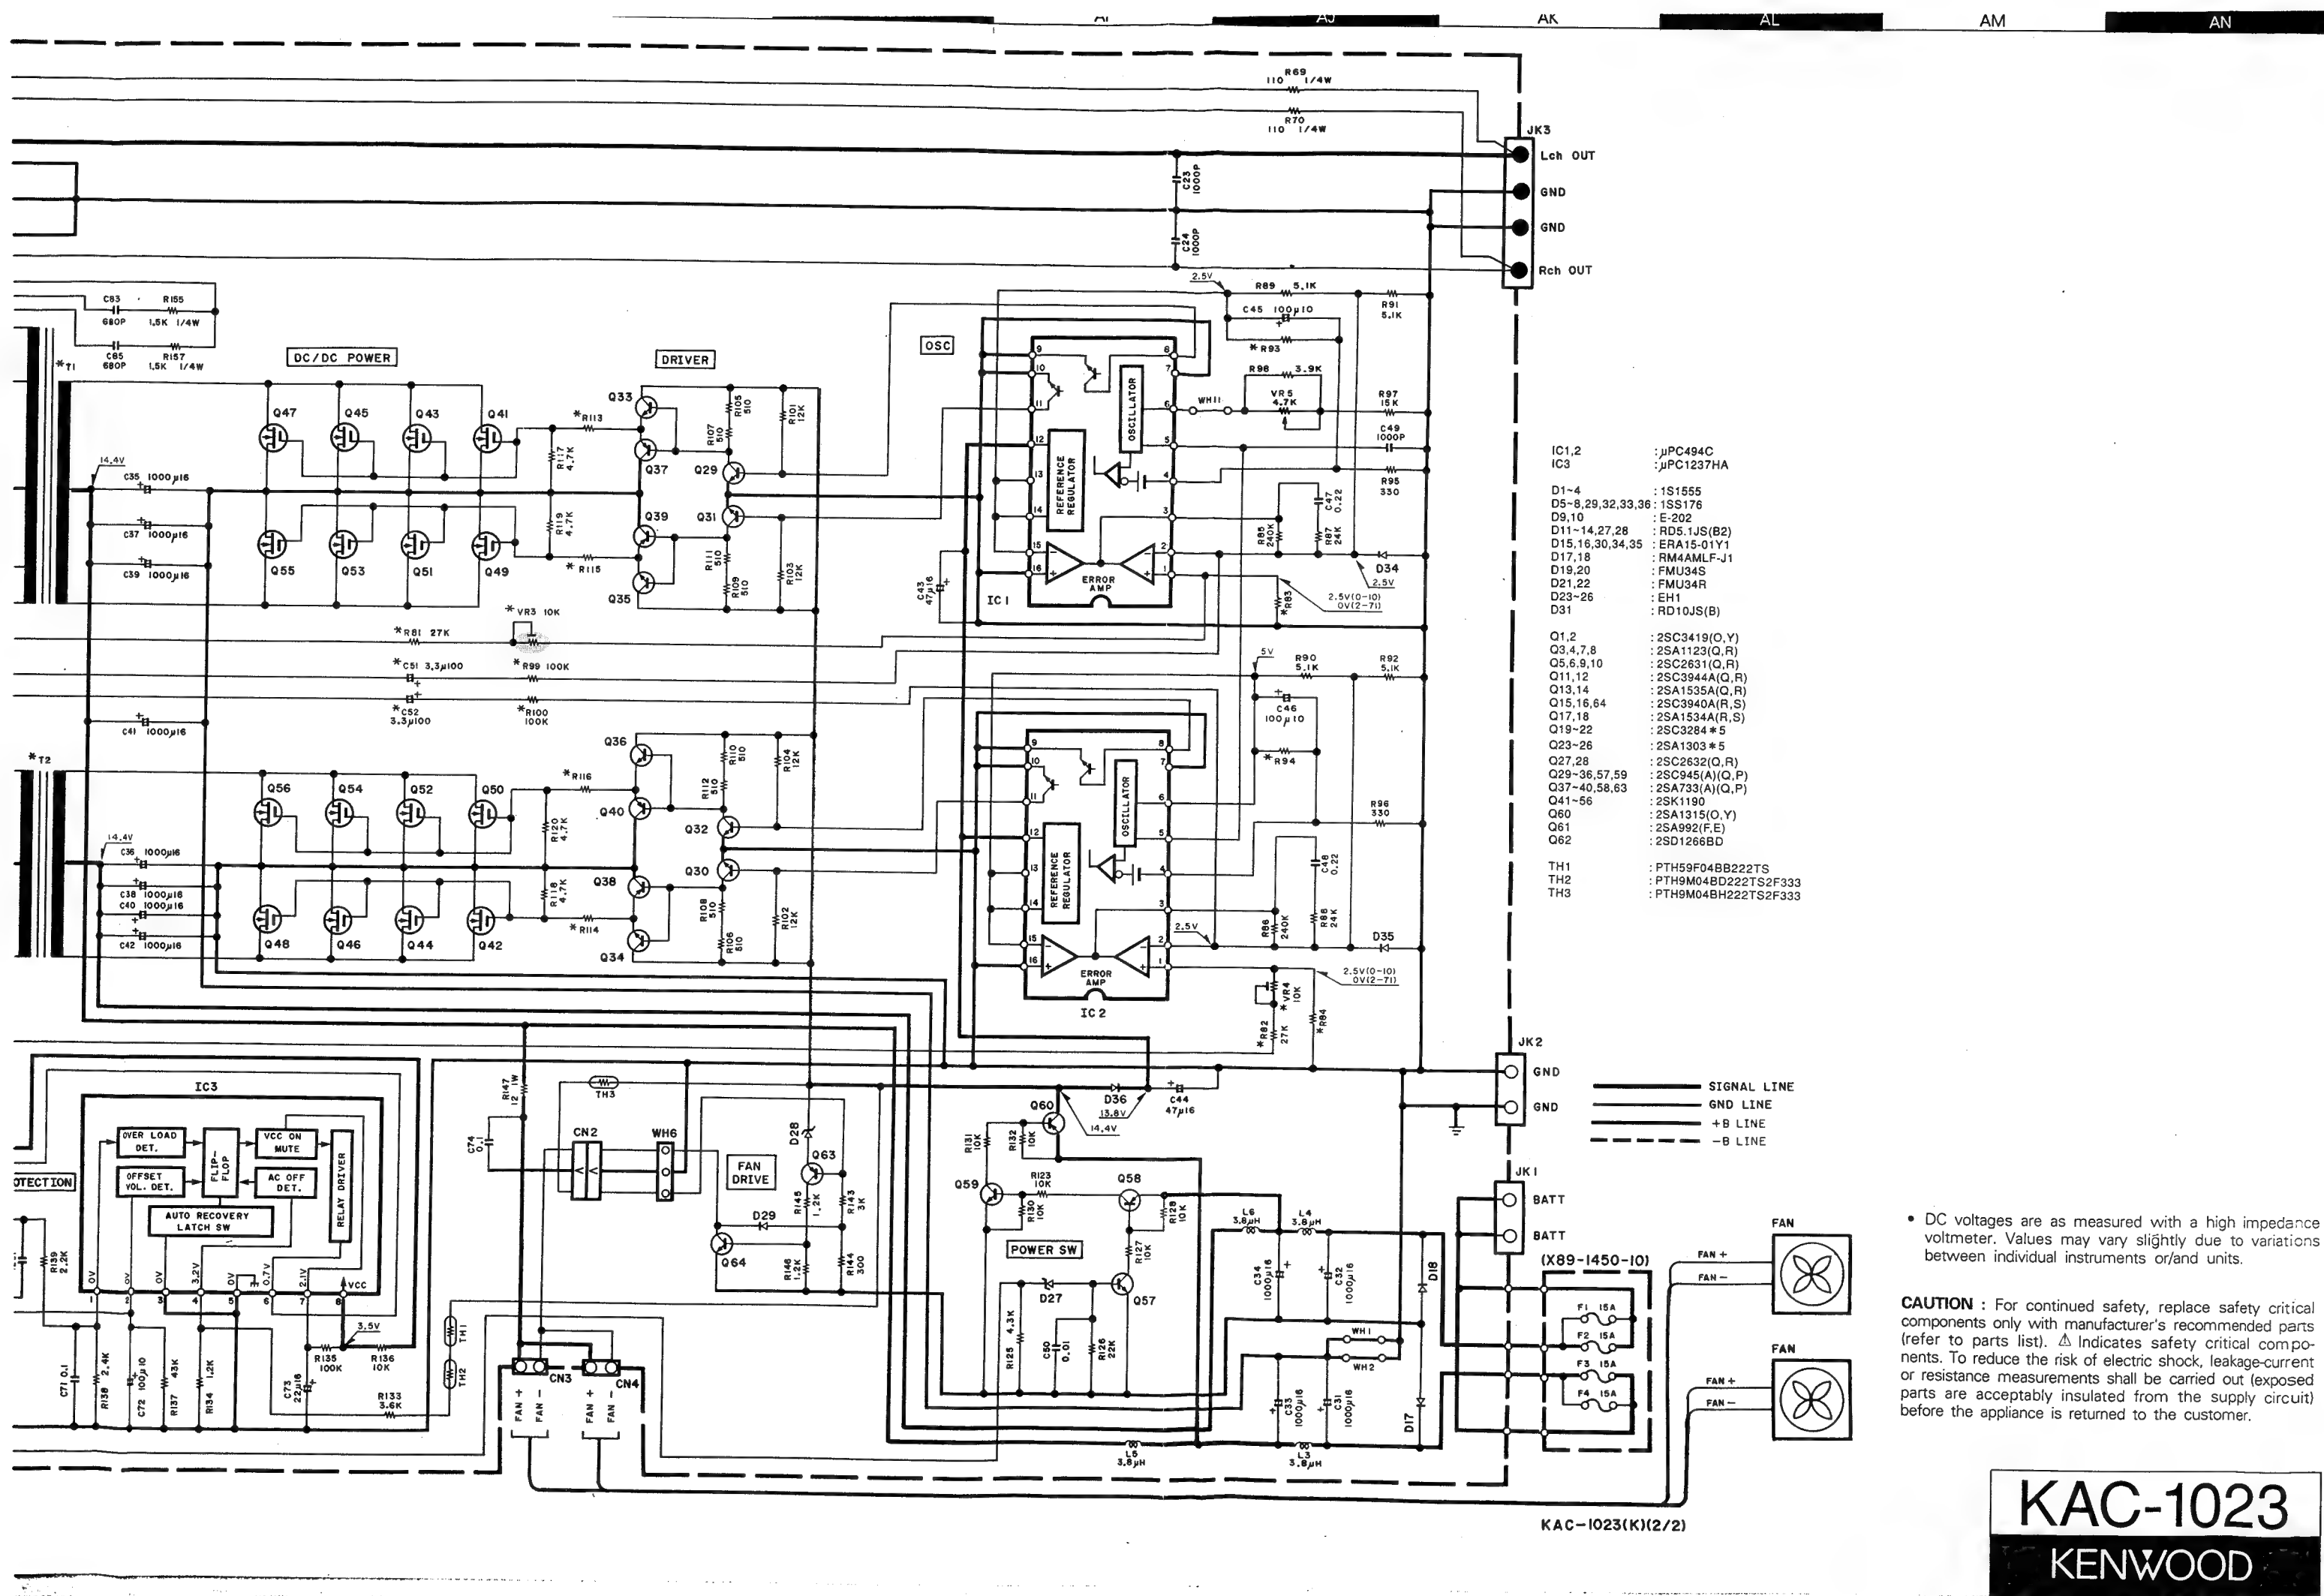

**CAUTION :** For continued safety, replace safety critical components only with manufacturer's recommended parts (refer to parts list).  $\Delta$  Indicates safety critical components. To reduce the risk of electric shock, leakage-current or resistance measurements shall be carried out (exposed parts are acceptably insulated from the supply circuit) before the appliance is returned to the customer.

## SPECIFICATIONS

**Audio section**

Max power output	
4 $\Omega$ : K, M type	600W x 2
: E type	500W x 2
4 $\Omega$ bridged : K, M type	1200W x 1
: E type	1300W x 1
Rated power output	
4 $\Omega$	200W x 2 (20Hz ~ 20kHz, less than 0.05% THD)
2 $\Omega$	300W x 2 (1kHz, 0.05% THD)
4 $\Omega$ bridged	600W x 1 (1kHz, 0.05% THD)
Frequency response	2 ~ 45kHz (-3dB)
Signal to noise ratio	105dB
Sensitivity	
Max	0.15V (rated output)
Min	3.0V (rated output)
Input impedance	10k $\Omega$ (at 1kHz)
Damping factor	More than 5000 (100Hz)
Low pass filter frequency	30 ~ 200Hz (variable)

**General**

Operating voltage	
: K, M type	12.0V (11 ~ 16 allowable)
: E type	14.4V (11 ~ 16 allowable)
Current consumption (Max)	80A
Dimensions	W : 273 x H : 56 x D : 400 (mm) 10-3 / 4 x 2-3 / 16 x 15-3 / 4 (inch)
Weight	
: K, M type	6.7kg (14.8lb)
: E type	6.5kg (14.3lb)

**Note:**

KENWOOD follows a policy of continuous advancements in development. For this reason specifications may be changed without notice.

**Note :**

Component and circuitry are subject to modification to insure best operation under differing local conditions. This manual is based on, the U.S.A. (K) standard, and provides information on regional circuit modification through use of alternate schematic diagrams, and information on regional component variations through use of parts list.

**KENWOOD CORPORATION**

Shionogi Shibuya Building, 17-5, 2-chome Shibuya, Shibuya-ku, Tokyo 150, Japan

**KENWOOD U.S.A. CORPORATION**

2201 East Dominguez Street, Long Beach, CA 90810;  
550 Clark Drive, Mount Olive, NJ 07828, U.S.A.

**KENWOOD ELECTRONICS CANADA INC.**

6070 Kestrel Road, Mississauga, Ontario, Canada L5T 1S8

**TRIO-KENWOOD U.K. LTD.**

KENWOOD HOUSE, Dwight Road, Watford, Herts., WD1 8EB United Kingdom

**KENWOOD ELECTRONICS BENELUX N.V.**

Mechelsesteenweg 418 B-1930 Zaventem, Belgium

**KENWOOD ELECTRONICS DEUTSCHLAND GMBH**

Rembrücker-Str. 15, 6056 Heusenstamm, Germany

**TRIO-KENWOOD FRANCE S.A.**

13 Boulevard Ney, 75018 Paris, France

**KENWOOD LINEAR S.p.A.**

20125, MILANO-VIA ARBE, 50, ITALY

**KENWOOD ELECTRONICS AUSTRALIA PTY. LTD.** (A.C.N 001 499 074)

P.O. BOX 504, 8 FIGTREE DRIVE, AUSTRALIA CENTRE, HOMEBUSH, N.S.W. 2140, AUSTRALIA

**KENWOOD & LEE ELECTRONICS, LTD.**

Wang Kee Building, 4th Floor, 34-37, Connaught Road, Central, Hong Kong
